Climate/Water Primer

Mainstreams' newest program is off to a great start.

This interdisciplinary program is being piloted at Selkirk School in Kimberley and so far has involved classes in Geography, Chemistry, Leadership and Outdoor Education.

Leadership class pulling invasive plants

Planting Mark Creek Riparian

Mainstreams in partnership with Kimberley City is planting riparian vegetation in the new green space created during the Mark Creek Flume Restoration that is immediately downstream from the log bridge across from the Platzl.

The new trees and shrubs will provide shade during hot summer days as well as help anchor the bank against erosion.

This project has been made possible by generous contributions of soil, equipment and people from the City and a Community Initiatives grant through the Regional District of East Kootenay.

Geography Class Exploring Wetlands at Eimer's Lake in the Kimberley Nature Park
